

BioTech International, Inc.

BioChallenge

Take the BioTech BioChallenge. This service from BioTech International compares coolants for you, side by side, under controlled conditions that simulate your working environment.

- > Do you wonder whether yours is the best coolant?
- > Are you considering a coolant change?

The BioTech BioChallenge clarifies these questions. We will show you how growth of **bacteria** and **fungi** correlates with:

- The loss of protective organic compounds in the working coolant
- The loss of pH buffering capacity
- The onset of corrosion
- Offensive odor

This is the best way to compare biocides without the expense or risk of a full scale application.

Send us 100 cc of metal working fluid concentrate (your incumbent and the challenger) and 100 cc of the nastiest, dirtiest, most grossly contaminated, used coolant available from a process within your operation.

For a surprisingly small cost, you will have a complete confidential report of the study in about 10 weeks.

Call BioTech International at **800-842-5888** or **(979) 793-7880** for more information. Visit our website: www.biotechintl.com.
